# **COURSE INFORMATION**

#### **COURSE DESCRIPTION**

Ongoing; Year 1 (3 Rotations - Required)

Title:	Research in Pathobiology
Course Number:	ME.300.800
Course Director:	Lee Martin, Ph.D.
Dates & Time:	By arrangement with course directors and individual mentors
	AUGUST – MAY (Ongoing, Year 1, 3 Rotations)

Long-term research projects will be undertaken with faculty members of the Graduate Program in Pathobiology serving as mentors. Course also covers the three required rotations for 1<sup>st</sup> Years.

#### **COURSE DESCRIPTION**

All Academic Years, All students (Required)

Title:	Pathobiology Journal Club
Course Number:	ME.300.803
Course Directors:	Ben Larman, Ph.D. & Kevan J. Salimian, M.D., Ph.D.
Dates & Times:	SEPTEMBER – MAY; TUES; 12:30-1:30PM
Location:	Mountcastle Auditorium (PCTB)

The objective of this course is to train graduate students in the fundamentals and art of understanding and determining the quality and structure of scientific publications. Students will select publications for presentation. The paper selection process will be a joint effort with a faculty member. Papers will be carefully read and scrutinized for detail of experimental background and logic, experimental approach and methods, results, figure composition and presentation, and interpretation. Students, with advice from a faculty memtor, will prepare and present to an audience a PowerPoint presentation (approx. 45 minutes) on the selected paper. The student will anticipate and prepare for questions about the paper as part of the presentation. The course is open to all graduate students and postdoctoral fellows.

# COURSE DESCRIPTION

Year 1, Semester 1 (Required)

Title:	Pathology for Graduate Students: Basic Mechanism of Disease
Course Number:	ME.300.713
Course Directors:	Christopher VandenBussche, M.D. and Laura Wake, M.D.
Dates & Time:	SEPTEMBER – OCTOBER; M,W,F; 9AM-2:00PM
Location:	РСТВ 113

Pathology for Graduate Students: Basic Mechanisms will concentrate on the basic mechanisms of tissue injury and disease both at the molecular level and as they are manifested in human tissues. Normal tissue histology and function will be discussed in relation to organ systems as a basis for the understanding of disease mechanisms.

A & P histology review lectures will be followed by faculty lectures and case studies. This block on basic pathogenic mechanisms will prepare students for more advanced topics on organ specific diseases that can be taken individually or in succession. The advanced blocks will be organized under 3 themes: 1) Neoplasia, 2) Immunopathology, and 3) Neuropathology.

Year 1, Semester 1 (Required)

Title: Course Number: Course Director: Dates & Time: Location: Analysis of Macromolecules: Energetics, Structure and Function ME.100.716 Dominique Frueh, Ph.D. SEPTEMBER – OCTOBER; M,T,Th,F; 9-10:30AM TBD

The course will cover (1) macromolecules, (2) physical chemical principles dictating their biological behavior, and (3) methods to study them. Lectures will focus on practical application of the methods, experimental design, data collection, and elementary aspects of data analysis.

### **COURSE DESCRIPTION**

Year 1, Semester 1 (Required)

Title:	Intro to Responsible Conduct of Research (replaces Ethics I and II)
Course Number:	ME.800.811
Course Director:	Office of Graduate Biomedical Education
Time:	OCTOBER – NOVEMBER; Mondays, 2-3:30PM
Location:	WBS Auditorium

This first-year course incorporates discussion on topics such as: (a) the scientist as a responsible member of society, (b) research misconduct, (c) data acquisition and management, (d) authorship and publication practices, (e) mentor and trainee responsibilities, (f) use of animals in research, (g) conflicts of interest, (h) collaborative research and (i) human subjects protection. By inviting graduate students from a variety of training programs, the course provides a forum for students to share their experiences. Attendance is required for all sessions.

#### **COURSE DESCRIPTION** Year 1, Semester 1 (Required)

Title:	Molecular Biology and Genomics
Course Number:	ME.260.709
Course Directors:	Jeffery Coller, Ph.D. and Jeff Corden, Ph.D.
Dates & Times:	NOVEMBER – DECEMBER; M,T,Th,F; 9-10:30AM
Location:	TBD

This course module covers the Molecular Biology and Genomics of both prokaryotes (using E. coli as the model organism) and eukaryotes, with a focus on "model organisms" including yeast, flies, worms, mice as well as humans. Both the Molecular Biology (reductionist) perspective and the Genomics (systems biology) perspective will be provided on each topic, and there will be heavy emphasis on mechanism and regulation of fundamental processes in biological information transfer DNA->RNA-> protein. This lecture module will cover genes and genomes, transcription and RNA world, replication, chromosome structure and function and genome instability.

Year 1, Semesters 1 & 2 (Required)

Title: Course Number: Course Director: Dates & Time: Location: **Principles of Genetics** ME.110.733 Erika Matunis, Ph.D. DECEMBER – JANUARY; M,T,Th,F; 9-10:30AM TBD

This short lecture course will cover fundamental principles of genetics, focusing primarily on principles of genetics, focusing primarily on model eukaryotes. Problem sets will be an integral learning tool in this course.

# COURSE DESCRIPTION

Year 1, Semester 2 (Required)

Title: Course Number: Course Director: Dates & Time: Location: **Cell Structure and Dynamics** ME.110.728 Jian Liu, Ph.D. JANUARY - FEBRUARY; M,T,Th,F; 9-10:30AM TBD

The objective of this course is to provide the basics of cell biology, including the structure, function and biogenesis of cellular organelles. Also covered are essential concepts on the cytoskeleton, cell-cell and cell-extracellular matrix interactions, cell motility, chaperones, and protein turnover.

# COURSE DESCRIPTION

Year 1, Semester 2 (Required)

Title:	Pathways and Regulation
Course Number:	ME.360.728
Course Directors:	Anastasia Kralli, Ph.D. & Zhaozhu Qiu, Ph.D.
Dates & Time:	FEBRUARY – MARCH; M,T,Th,F; 9-10:30AM
Location:	Wood Basic Science Auditorium/PCTB 115

This course will cover the principles of membrane transport, bioenergetics, metabolic pathways, cell cycle and cell death with particular emphasis on regulatory mechanisms including receptor-mediated signaling, small GTPases, lipid molecules, kinases and phosphatases.

Year 1, Semester 2 (Required)

Title:	Pathology for Graduate Students: Cancer
Course Number:	ME.300.714
Course Director:	Angelo DeMarzo, M.D., Ph.D.
Dates & Time:	FEBRUARY – MARCH; M & F; 11AM-2:00PM
Location:	Carnegie 489

Pathology for Graduate Students: Cancer will concentrate on the biology of cancer at the molecular, cellular, and tissue levels. While the course is largely organized to study cancer in the context of specific organs, general principles of neoplasia will be continuously discussed as a basis for understanding the disease process. The format will include lectures, discussion of research papers, and review of histological slides.

#### **COURSE DESCRIPTION**

Year 1, Semester 2 (Required)

Title: Course Number: Course Director: Dates & Time: Location: **Graduate Immunology** ME.250.703 Mark Soloski, Ph.D. FEBRUARY – MAY; T & Th; 10:30AM-12:30PM TBD

This is an introductory course designed to provide graduate students with a comprehensive survey of modern cellular and molecular immunology. The course consists predominately of lectures but also includes discussion sessions focusing on important recent research papers. This course is open to all graduate students and postdoctoral fellows.

## **COURSE DESCRIPTION**

Year 1, Semester 2 (Required)

Title:	Pathobiology and Disease Mechanisms
Course Number:	ME.300.710
Course Director:	Richard Roden, Ph.D.
Dates & Time:	FEBRUARY – MAY; WED; 9AM-12:00PM
Location:	Carnegie 489

Pathobiology and Disease Mechanisms provides an intensive study of human disease through traditional lectures, and the discussion of the primary scientific literature including classic and current cutting edge papers. The course combines lectures with small group discussions, and will cover topics relevant to infectious, degenerative, neoplastic, and inflammatory disease of the major organ systems. The primary objective of the course is to understand how research findings elucidate the underlying mechanisms leading to clinical manifestations of disease (seen grossly and microscopically in the traditional Pathology component of the course). Active student participation is required in the form of presenting and discussing papers. The course is open to all PhD and MD/PhD students.

Year 1, Semester 2 (Required)

Title: Course Number: Course Director: Dates & Time: Location: Pathology for Graduate Students: Immunology & Infectious Disease ME.300.716 Gyanu Lamichhane, Ph.D. APRIL – MAY; M & F; 9AM-12:00PM Carnegie 489

Pathology for Graduate Students: Immunology and Infectious Disease will concentrate on the basic mechanisms of Immunology and Infection in human diseases. The format will include lectures, discussion of research papers, and review of histological slides.

#### **COURSE DESCRIPTION** Year 1, Semester 2 (Required) Title: Pathology for Graduate Students: Neuropathology ME.300.715 Course Number: Philip Wong, Ph.D. Course Director: Dates & Time: MAY; M,W,F; 9AM-12:00PM Location: Carnegie 489 Pathology for Graduate Students: Neuropathology will concentrate on the basic mechanisms of Neuropathology both at the molecular level and in human diseases. Normal tissue histology and function will be discussed as a basis for the understanding of Neuropathology. Animal models of neuropathological diseases will be critically considered.

# COURSE DESCRIPTION

Year 2, Semester 2 (Required)

Title:	Grant Writing 101
Course Numbers:	ME.300.717
Course Director:	Nicholas Roberts, Vet.M.B., Ph.D.
Dates & Time:	MARCH – MAY; M,W,F; 10:00-11:00AM
Location:	TBD

The course will explore how to pick a scientific area. Students will write mini-grants in the format of an NIH F31 pre-doctoral award.

Year 3 (Required)

Title:	Introduction to Translational Research I & II
Course Numbers:	ME.300.711 (I) & ME.300.712 (II)
Course Director:	Aaron W. James, M.D., Ph.D.
Dates & Time:	Two Sections: One-half quarter each approximately 16 hours, each
Time & Locations:	Assigned by Course Director

Introduction to Translational Research is designed to acquaint pre-doctoral students with the language of anatomic pathology and clinical pathology through practical experiences. Students will rotate through surgical pathology and various laboratory services including chemistry, hematology, the blood bank, medical microbiology, and diagnostic immunology. Students will become acquainted with the resources that can be made available to research, and will appreciate the translational relevance of their research to clinical medicine. Open to students in the Graduate Program in Pathobiology and others with permission of the Program Directors.

# COURSE DESCRIPTION

Year 2 and Beyond (Optional)

Title:Teaching in PathobiologyCourse Numbers:ME.300.802Course Director:Lee J. Martin, Ph.D.Dates & Time:All quartersTime & Locations:Assigned by Course Director

Teaching in Pathobiology is designed to prepare students for teaching through participation as a teaching assistant for Pathobiology required courses. When registering for the course, please indicate the course number for which you will serve as a teaching assistant.

# **ELECTIVES:**

All students in their second year and beyond are **required** to take a one-semester elective course for credit in each academic year. Courses may be taken for a grade or pass/fail. Students may choose a course offered in the Johns Hopkins Medical Institutions, SPH or on the Homewood Campus subject to approval by the Program Director(s). Please note that Grant Writing 101 is a required second year course and does not count as an elective, nor does the optional course, Teaching in Pathobiology (ME.300.802) count as an elective.
